Advantages

- Drains reliably against backwater pressure
- Pump suitable for permanent operation with multi-vane impeller for maximum operating safety
- System suitable for installation in waterproof concrete

Description

The backwater pumping station for faecal-free wastewater is equipped with one pump and two mechanical backwater valves which close automatically in the event of backwater.

Normally, draining takes place via the natural gradient to the sewer. During the backwater phase, draining takes place via the integrated pump against backwater pressure directly into the sewage channel.

- With vertically adjustable upper section for continuous height and level compensation and integrated floor drain

- System suitable for installation in waterproof concrete, groundwater resistant up to 3 $\ensuremath{\mathsf{m}}$

- Backwater protection in accordance with EN 13564 type 5

- Including socket DN 50 for inlet and cable conduit

- Pump suitable for permanent operation with multi-vane impeller for maximum operational safety

- Including float switch for level measurement Type of wastewater:

wastewater without sewage
